

SY86 FM PC Radio

The SY86 FM PC Radio is a FM band (no AM) radio receiver with a RS232 interface. The PC Radio will easily install on any Windows 98/2000/XP . The SY86 consists of the FM radio chip with an adjustable antenna and connecting cables that plug into a standard RS232 port and the line-in or micro phone on the PC's sound card.

The SY86 provides the user with the ability to listen to their favorite radio programs or music right from their PC. The Radio is powered off of the RS232 so no external power supply is needed. The software can record music or programs from the radio that can be saved in the WAV format. The software also has an available "Play" function that allows the user to play the recorded radio programs from their PC.

Hardware installation

Plug The SY86 FM PC Radio into the RS232 port (COM1 or COM2) of your PC. If the PC has a sound card, plug the radio's RCA cable into the existing **LINE IN** or **MICOPHONE** port of the sound card. If not, plug the RCA jack into any speakers. Note that the recording function is not available when running the SY86 FM PC Radio software in this way. The computer will detect the SY86 FM PC Radio and look for a driver. If a driver is not found, it will then prompt for one. At this time, make sure that your SY86 FM PC Radio diskette is inserted into your computer floppy drive.

Software Installation

The SY86 FM PC Radio comes with user applications for Windows 98/2000/XP. The following installation installs the application into your PC. Installing under Windows 98/2000/XP. Forst of all, insert the SY86 FM PC Radio Utility diskette into CD drive. Click on My Computer icon. Select CD drive. Double click on Setup icon. After the Setup program of the radio pops up, simply follow the instructions on the screen to complete the installation.
